

3rd International Workshop on Model Based Architecting and Construction of Embedded Systems (ACES^{MB} 2010)

<http://www.artist-embedded.org/artist/ACES-MB-10.html>

In conjunction with MoDELS 2010, Oslo, Norway

Important Dates

Submission Deadline:

July 15th, 2010

Notification of Acceptance:

August 27th, 2010

Workshop Date:

October 4th, 2010

Organizing Committee

Stefan Van Baelen

K.U. Leuven-DistriNet, Belgium

Ileana Ober

University of Toulouse-IRIT, France

Huascar Espinoza

ESI Tecnalia, Spain

Thomas Weigert

Missouri S&T, USA

Iulian Ober

University of Toulouse-IRIT, France

Sébastien Gérard

CEA LIST/LISE, France

Programme Committee

Nicolas Belloir

LIUPPA, France

Jean-Michel Bruel

University of Toulouse-IRIT, France

Agusti Canals

CS-SI, France

Daniela Cancila

Sherpa Engineering, France

Arnaud Cucuru

CEA LIST/LISE, France

Jean-Marie Farines

UFSC, Brasil

Peter Feiler

SEI, USA

Robert France

CSU, USA

Bruce Lewis

US Army, USA

Isabelle Perseil

Telecom ParisTech, France

Dorina Petriu

Carleton University, Canada

Andreas Prinz

University of Agder, Norway

Bernhard Rumpe

RWTH Aachen, Germany

Douglas C. Schmidt

Vanderbilt University, USA

Bran Selic

Malina Software, USA

Jean-Bernard Stefani

INRIA Rhône-Alpes, France

Martin Törngren

KTH, Sweden

Tullio Vardanega

University of Padua, Italy

Eugenio Villar

Universidad de Cantabria, Spain

Tim Weikiens

OOSE, Germany

Sergio Yovine

VERIMAG, France

Steering Committee

Mamoun Filali

University of Toulouse-CNRS-IRIT, France

Susanne Graf

Univ. Joseph Fourier-CNRS-VERIMAG, France

Motivation

The development of embedded systems with real-time and other critical constraints raises distinctive problems. In particular, development teams have to make very specific architectural choices and handle key non-functional constraints related to, for example, real-time deadlines and to platform parameters like energy consumption or memory footprint. The last few years have seen an increased interest in using model-based engineering (MBE) techniques to capture dedicated architectural and non-functional information in precise (and even formal) domain-specific models in a layered construction of systems. MBE techniques are interesting and promising for the following reasons: They allow to capture dedicated architectural and non-functional information in precise (and even formal) domain-specific models, and they support a layered construction of systems, in which the (platform independent) functional aspects are kept separate from architectural and non-functional (platform specific) aspects, where the final system is obtained by combining these aspects later using model transformations.

Objective

The objective of this workshop is to bring together researchers and practitioners interested in model-based engineering to explore the frontiers of architecting and construction of embedded systems. We are seeking contributions relating to this subject at different levels, from modelling languages and semantics to concrete application experiments, from model analysis techniques to model-based implementation and deployment. Given the criticality of the application domain, we particularly focus on model-based approaches yielding efficient and provably correct designs. Concerning models and languages, we welcome contributions presenting novel modelling approaches as well as contributions evaluating existing ones. We target in particular:

- Architecture description languages (ADLs). Architecture models are crucial elements in system and software development, as they capture the earliest decisions which have a huge impact on the realisation of the (non-functional) requirements, the remaining development of the system or software, and its deployment. We are particularly interested in examining:
 - Position of ADLs in an MBE approach;
 - Relations between architecture models and other types of models used during requirement engineering (e.g., SysML, EAST-ADL, AADL), design (e.g., UML), etc.;
 - Techniques for deriving architecture models from requirements, and deriving high-level design models from architecture models;
 - Verification and early validation using architecture models.
- Domain specific design and implementation languages. To achieve the high confidence levels required for critical embedded systems through analytical methods, in practice languages with particularly well-behaved semantics are often used, such as synchronous languages and models (Lustre/SCADE, Signal/Polychrony, Esterel), super-synchronous models (TTA, Giotto), scheduling-friendly models (HRT-UML, Ada Ravenscar), or the like. We are interested in examining the model-oriented counterparts of such languages, together with the related analysis and development methods.
- Languages for capturing non-functional constraints (MARTE, AADL, OMEGA, etc.)
- Component languages and system description languages (SysML, MARTE, EAST-ADL, AADL, BIP, FRACTAL, Ptolemy, etc.).

Workshop Format

This full-day workshop will consist of an introduction by the organizers, an invited talk, presentations of accepted papers, an in-depth discussion of a set of topics that are identified by the attendees, and a concluding session presenting the results of the discussion groups.

Submissions

Attendees are invited to submit a short position paper (max. 5 pages) or a full technical contribution (max. 15 pages) in PDF format. Submissions must conform to the Springer LNCS formatting guidelines. Papers can be submitted online at <http://www.easychair.org/conferences/?conf=acesmb10>. The authors will be notified about acceptance before the MoDELS 2010 early registration deadline. Only full papers can be candidate for the best paper award (which will be included in the MoDELS 2010 Workshop Reader). All accepted papers (full and short) will be published in the Workshop Proceedings, which will be given to the participants in hardcopy form, and distributed electronically via CEUR and the ARTIST2 website.
